

Instruction on How to Generate Data Region

Before generating files, please make sure that every single file is organized in their corresponding region folders.

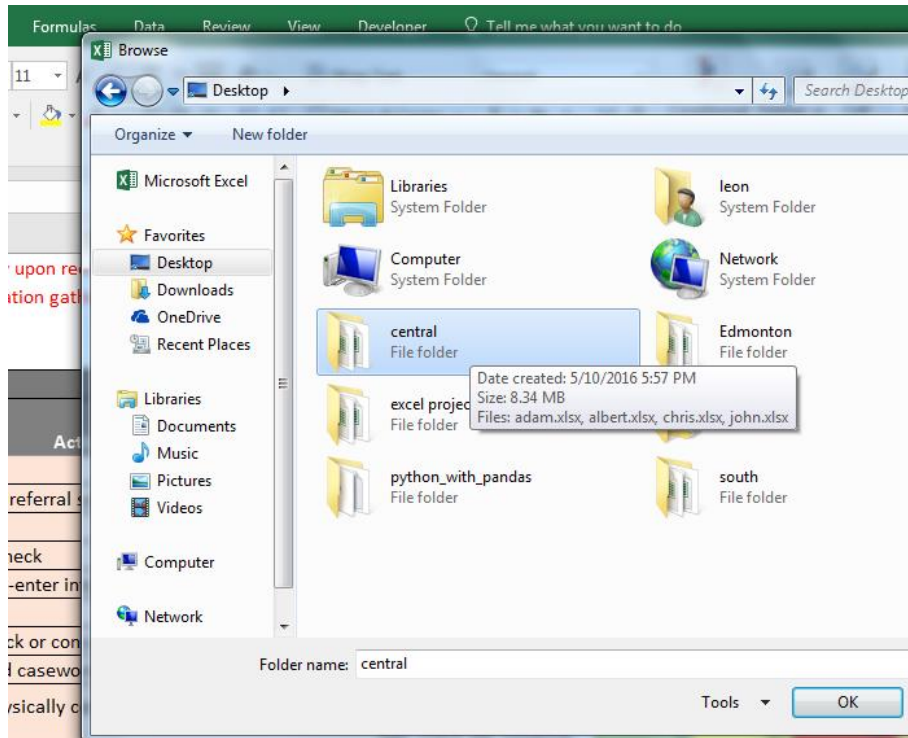

1. Open the file named [templet.xlsm](#)
2. On the very top of this sheet, click the button named “Generate”

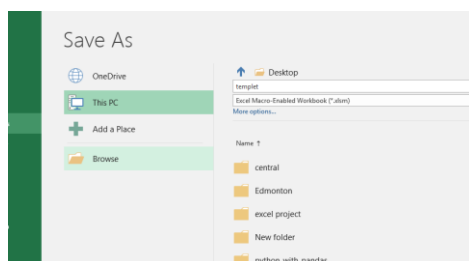

3. There would have a window pop up to indicate how many columns do you want to construct. In this case type number 3 in the box. Click ok

- Another window will pop up, please select the folder where contains response files. Click ok

- The system will automatically generate the results for you.
- Once finished please **save as** the result file.
Please **DO NOT CHANGE** the original file at all, otherwise it would cause errors.

There are buttons named "Delete" on each sheet which will delete the whole generated data on the current sheet. Please make sure that **CLEAN EVERY DATA FIRST ON EACH PAGE** before start a new generate new things. Otherwise it would cause errors.
